A new model for education finance

N. Sarantuya

Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap

teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line

by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has

not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil

formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in

the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart

line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap

has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the

per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint

in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget

apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment

gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in

the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding

constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the

budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the

attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than

in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the

binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes

the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while

the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather

than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds

the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book

takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen

while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market

rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and

finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The

book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has

risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour

market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line

and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed.

The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending

has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher

labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by

line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not

closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula.

Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the

teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line

by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has

not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil

formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in

the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart

line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap

has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the

per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint

in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget

apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment

gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in

the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding

constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the

budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the

attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than

in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the

binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes

the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while

the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather

than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds

the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book

takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen

while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market

rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and

finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The

book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has

risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour

market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line

and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed.

The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending

has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher

labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by

line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not

closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula.

Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the

teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line

by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has

not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil

formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in

the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart

line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap

has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the

per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint

in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget

apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment

gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in

the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding

constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the

budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the

attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than

in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the

binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes

the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while

the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather

than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds

the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book

takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen

while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market

rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and

finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The

book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has

risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour

market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line

and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed.

The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending

has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher

labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by

line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not

closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula.

Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the

teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line

by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has

not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil

formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in

the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart

line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap

has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the

per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint

in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget

apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment

gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in

the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding

constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the

budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the

attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than

in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the

binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes

the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while the attainment gap has not closed. The book takes the budget apart line by line and finds the binding constraint in the teacher labour market rather than in the per-pupil formula. Spending has risen while
