Agriculture and food supply

B. Altantsetseg

Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high

data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the

two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while

output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing

capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with

pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets

the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high

while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in

processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them

with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book

sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic

high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint

in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains

them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The

book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a

historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second

constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side,

explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.

The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at

a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the

second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by

side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has

fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are

at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds

the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side

by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal

has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers

are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and

finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends

side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per

animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd

numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data,

and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two

trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output

per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity.

Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity

data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the

two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while

output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing

capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with

pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets

the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high

while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in

processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them

with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book

sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic

high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint

in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains

them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The

book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a

historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second

constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side,

explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.

The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at

a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the

second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by

side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has

fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are

at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds

the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side

by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal

has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers

are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and

finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends

side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per

animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd

numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data,

and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two

trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output

per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity.

Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity

data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the

two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while

output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing

capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with

pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets

the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high

while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in

processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them

with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book

sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic

high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint

in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains

them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The

book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a

historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second

constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side,

explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.

The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at

a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the

second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by

side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has

fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are

at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds

the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side

by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal

has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers

are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and

finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends

side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per

animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd

numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data,

and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two

trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output

per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity.

Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity

data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the

two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while

output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing

capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with

pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets

the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high

while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in

processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them

with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book

sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic

high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint

in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains

them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The

book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a

historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second

constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side,

explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.

The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at

a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the

second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by

side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has

fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are

at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers
are at a historic high while output per animal
has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds

the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side

by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal

has fallen. The book sets the two trends side
by side, explains them with pasture-carrying-capacity data, and finds
the second constraint in processing capacity. Herd numbers are
at a historic high while output per animal has
fallen. The book sets the two trends side by
side, explains them with pasture-carrying-capacity data, and finds the
second constraint in processing capacity. Herd numbers are at
a historic high while output per animal has fallen.
The book sets the two trends side by side,
explains them with pasture-carrying-capacity data, and finds the second
constraint in processing capacity. Herd numbers are at a
historic high while output per animal has fallen. The
book sets the two trends side by side, explains
them with pasture-carrying-capacity data, and finds the second constraint
in processing capacity. Herd numbers are at a historic
high while output per animal has fallen. The book
sets the two trends side by side, explains them
with pasture-carrying-capacity data, and finds the second constraint in
processing capacity. Herd numbers are at a historic high
while output per animal has fallen. The book sets
the two trends side by side, explains them with
pasture-carrying-capacity data, and finds the second constraint in processing
capacity. Herd numbers are at a historic high while
output per animal has fallen. The book sets the
two trends side by side, explains them with pasture-carrying-capacity
data, and finds the second constraint in processing capacity.
Herd numbers are at a historic high while output
per animal has fallen. The book sets the two
trends side by side, explains them with pasture-carrying-capacity data,
and finds the second constraint in processing capacity. Herd
numbers are at a historic high while output per
animal has fallen. The book sets the two trends
side by side, explains them with pasture-carrying-capacity data, and
finds the second constraint in processing capacity. Herd numbers

are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers

finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends

side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per

animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen.
The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd numbers are at a historic high while output per animal has fallen. The book sets the two trends side by side, explains them with pasture-carrying-capacity data, and finds the second constraint in processing capacity. Herd
